Glass fibers are the materials consisting of extremely fine glass fibers, used in making various products, such as yarns, fabrics, insulators, and structural objects or parts. It is also called spun glass. Glass fiber yarn is a long continuous length of interlocked glass fiber. E-glass ('E' because of initial electrical application), is alkali free, and was the first glass formulation used for continuous filament formation. It now makes up most of the fiberglass production in the world, and also is the single largest consumer of boron minerals globally. It is susceptible to chloride ion attack and is a poor choice for marine applications. The global E Glass Fiber Yarn industry has a rather high concentration. The major manufacturers are concentrated in China, North America, Europe and Japan, such as Owens Corning, Jushi Group, PPG Industries, CPIC and Taishan Fiberglass (Sinoma). At present, Owens Corning is the world leader, holding 25.85% production market share in 2016.
