Electric scooters are plug-in or battery based electric vehicles that can be recharged from an external source of electricity. The electricity stored on board in a rechargeable battery can supply power to one or more electric motors for attaining locomotion. E-Scooters have lesser operating costs compared to the conventional ICE vehicles with performance intact. E-mobility has become an eco-friendly alternative with increasing pressure to reduce the carbon footprint across the globe. Factors such as increase in fuel costs and maintenance of fuel-powered vehicles are expected to have positive impact on the industry growth. With the declining battery costs, new government targets for the introduction of e-mobility, and decent growth in renewable sector, manufacturers are focusing on product development with technological advancements in place.
