ECG (Electrocardiogram) Device is a device which records the heart activities through electric signals and are amplified on the ECG monitor. ECG devices are used to diagnose types of heart diseases and arrhythmias in a person's body therefore assist the appropriate therapy. The ECG test is noninvasive and painless procedure and determines abnormality patterns in heart. There are four different types of ECG device which determine heart activities of body under certain condition or activities. The high adoption rate of new technology is expected to boost the market in the U.S. for ECG holter monitoring devices. The U.S. is expected to remain dominant market for ECG devices whereas APAC region is expected to witness highest growth due to large number of population suffering from cardiovascular diseases and increase in budding manufacturers providing ECG device at competitive prices.
