The global ECG Telemetry Devices market was valued at 381.27 Million USD in 2021 and will grow with a CAGR of 5.83% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

ECG telemetry device is used to monitor and record the electrical activity of the heart, in which the device detects the electrical impulse generated by the polarization and depolarization of cardiac tissue and translate it into a waveform. This technique is used to detect the cardiac abnormalities and also to analyze the effect of drug or device that is used to regulate the heart. The ECG telemetry device can detect complex dysrhythmias and myocardial ischemia. Geographically, the United States and Europe market contributes a larger proportion of revenues to this product category. Owing to expensive medical treatment, demand for home care, availability of efficient reimbursement scenario and government interventions to curb per patient healthcare expenditure has driven the market in these geographies. Asia-Pacific as of now is at a very nascent stage but the with the burgeoning cardiovascular diseases and availability of high disposable income market is expected to grow at a rapid pace in coming 5-7 years.
