An eddy current separator uses a powerful magnetic field to separate non-ferrous metals from waste after all ferrous metals have been removed previously by some arrangement of magnets. Eddy Current Separator (ECS) is an advanced metal sorting unit that is capable of separating non-ferrous metals such as aluminium and copper from dry recyclables, commonly used to separate non-ferrous metals from mixed waste and other streams. It purely separate aluminium, copper, brass and other non-ferrous metals from your product stream, municipal solid waste recycling, scrap residue and other recyclables. The Major production regions of Eddy Current Separators are North America, Europe, China, which accounted for about 82.29% of production market share in 2017. Europe is the largest consumption region with a market share of 31.01% in 2017.
