The global Edible Asparagus market was valued at 491.66 Million USD in 2021 and will grow with a CAGR of 5.11% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Asparagus is a spring vegetable, a flowering perennial plant species in the genus *Asparagus*. It was once classified in the lily family, like the related *Allium* species, onions and garlic, but the Liliaceae have been split and the onion-like plants are now in the family Amaryllidaceae and *Asparagus* in the Asparagaceae. Sources differ as to the native range of *Asparagus officinalis*, but generally include most of Europe and western temperate Asia. It is widely cultivated as a vegetable crop. Asparagus is actively sought by major companies as a key ingredient in soups on account of its nutritive properties and palatable taste. Asparagus is widely predicted to become the primary choice in the soup manufacturing industry as many companies already make soup with asparagus and this is only expected to grow in the future.
