The global Edible Insects market was valued at 455.86 Million USD in 2021 and will grow with a CAGR of 13.79% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

With increased demand for animal-based food and to feed the large population, insects are being used as a source of food. Owing to the lower ecological footprint required for the production of insects. Consumption of insects also depends on human health issue and culture. Increased demand for edible insects is also resulting in the development of new technologies used to harvest insects in a more efficient way. Along with harvesting of insects, companies are also focusing on storing edible insects to keep them fresh for a long time. However, there are still some major factors hampering the market growth including safety and health issues, and legislative requirements. Companies are also focusing on developing various edible insect ingredients. Edible insects are also being offered along with the information on their nutrient contents. Compared to the ingredients, edible insects as a whole is likely to be consumed on a large scale. In Asian countries such as Thailand and China, edible insects are sold as a whole to be consumed by people. Moreover, they are also the part of street food in these countries. With the rising preference for edible insects as a whole, companies are also providing packed edible insects as a whole in dried, BBQ, and raw form. Companies are also moving towards providing food-grade certified insects for consumption. Moreover,

activities such as insect harvesting requires very less investment and it is considered as the best way to earn for the poorest section of society. However, companies are finding new ways to offer edible insects with maximum nutrition value.
