Abstracts

The global Elastomeric Membrane market was valued at 2919.33 Million USD in 2021 and will grow with a CAGR of 3.56% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

On the basis of type, the elastomeric membrane market has been segmented into sheet and liquid applied elastomeric membrane. The market for sheet membrane type of elastomeric membrane is the largest due to its superior performance and increasing demand for flat roofs in non-residential buildings. Sheet membranes such as TPO and EPDM are widely used in the enhancement of energy efficiency of buildings. High demand for green roofing in green buildings is expected to trigger the use of sheet membranes. The liquid applied membrane is the fastest-growing type owing to its seamless installation, convenience associated with its use, and availability of less expensive grade products as compared to sheet membranes. On the basis of application, the elastomeric membrane market has been segmented into roofs & walls, underground construction, wet areas, and other applications. Roofs & walls is the largest as well as the fastest-growing application in the elastomeric membrane market. High expenditure on non-residential projects involving, commercial, institutional, and office buildings is expected to drive the growth of elastomeric membrane market in flat roofs.
