Abstracts

The global Electric Commercial Vehicle market was valued at 9715.62 Million USD in 2021 and will grow with a CAGR of 8.53% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Some of the major drivers of this market are the need for fuel-efficient and emission-free vehicles and the increasing demand for electric commercial vehicle such as electric truck in the logistics industry to minimize the additional liability of fuel expenses. Innovations in EV battery capacity, which will enable electric commercial vehicle to carry heavy loads over longer range, can create new revenue generation opportunities. Whereas, oil companies lobbying against EV, limited battery power, and longer charging duration are few challenges for the global market. The bus segment is estimated to be the fastest growing market, in terms of volume, for electric commercial vehicle, by vehicle, followed by van, pick-up truck, and truck. Various government mandates and individual country targets to phase out fossil fuel-based public transportation system and to replace them with electric buses will help the bus market grow over the forecast period.
