Abstracts

The global Electric Double-layer Capacitor (EDLC) market was valued at 99.95 Million USD in 2021 and will grow with a CAGR of 17.33% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Electric double-layer capacitors (EDLCs) are energy storage devices that have higher capacitance than other capacitors or batteries. Compared with batteries, these devices have higher power capacity, longer life cycle, and faster charging options. Instead of conventional dielectrics, EDLCs have two plates that are separated by electrolytes. These plates are layers of the same substrate. The electrical properties of these plates help to separate the charge effectively, which even highly thin physical layers cannot do. The absence of heavy dielectric materials in EDLCs eases the packaging with a larger surface area resulting in high capacitance. EDLCs can generate capacitance values in farads instead of microfarads and picofarads, which are the measurement units for capacitance. The growth in the adoption of graphene and carbon nanotube EDLCs will be one of the key trends that will contribute to the growth of this market. To counter the expensive price tag and limited scalability, EDLC manufacturers are coming up with EDLCs based on carbon nanotubes and graphene. EDLCs that are made by joining nanotubes and graphene can store huge amount of energy that could be released quickly to create a power surge. Improved performance in many applications such as consumer electronics and electric vehicles, lightweight, better elastic properties

and mechanical strength are some of the features offered by the EDLCs. The EDLC market consists of many vendors and is still in the growth stage. The adoption of this technology is limited to developed regions such as Europe and North America and a few countries of Asia like Japan, South Korea, and China. Vendors in this double-layer capacitor market have already started offering devices with technologies that will assist in the improvement of safety and the performance levels.
