Electric Double Layer Capacitor is electrochemical capacitors which energy storage predominant is achieved by Double-layer capacitance. Double-layer capacitance - electrostatic storage of the electrical energy achieved by separation of charge in a Helmholtz double layer is at the interface between the surface of a conductor electrode and an electrolytic solution electrolyte. Along with the development of Chinese domestic Industrial technology, Chinese EDLC have been made a lot of progress, but it also has a long way to be advanced in the world, especially in high-end products. Otherwise, most of Chinese companies are rather small, compared to other countries` companies. However, the high cost of the systems and effectiveness of the device are the major factors hindering the growth of this market. In the future, the manufacturers who want to occupy the market must depend on market mechanism reform, core technology improvement, manufacturing equipment innovation, brand establishment and customer training and service enhancement.
