An Electric Fireplace is an electric heater that mimics a fireplace burning coal, wood, or natural gas. Electric Fireplaces are often placed in conventional fireplaces, which can then no longer be used for conventional fires. They plug into the Freestanding Electric Fireplaces, and can run on a 'flame only' setting, or can be used as a heater, typically consuming 1.4-1.6 kW that can heat a 400 sq ft (37 m2) room. There is also a certain space of demand of Electric Fireplace product in market, but basically it shows the scarcity of high-end products and excess capacity of low end products. There is a large market demand of high-end products to seize market share of imports.
