Abstracts

The global Electric Guitar market was valued at 45.59 Million USD in 2021 and will grow with a CAGR of 3.73% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Electric guitars are a type of guitars in which strumming the strings themselves is not the primary source of the sound. Rather, the vibrations caused by the movement of the strings are captured and magnified electronically in order to produce a louder output. The sound of an electric guitar can also be electrically modified, since an electrical representation of the vibration of the string is produced in electric guitars. This can then be modulated with the help of dials and other controls on the electric guitar as well as pedals. This is the primary factor distinguishing electric guitars from acoustic guitars; the sound produced by the latter comes directly from the vibration of the strings and thus can't be modulated electronically. United States electric guitar market size was valued at around USD 373.59 million in 2016. APAC countries such as China, India, and South Korea currently have a low penetration rate but are expected to emerge as an attractive opportunity for vendors to venture during this period. The region is predicted to emerge as the fastest growing markets for electric guitars globally. The global Electric Guitar industry is characterized by several large international manufactures and many smaller regional manufactures. Therefore, market share concentration is relatively low. The four largest operators account for about 65.11% of total industry revenue in 2016. Larger

companies are looking to expand their footprint in nearby areas, where they can add value and turn once-struggling operations into profitable ventures. The increase in disposable income, changing lifestyles, and high standards of living have motivated individuals to spend more on leisure activities. It has led to a rise in the sales of musical instruments such as guitars, pianos, and keyboards. To capitalize on the market demand, vendors are predicted to focus more on the frequent changes in consumer preferences presented by the market. Established vendors are likely to scale up their investments in branding and expanding their collection of existing electric guitars, as well as acquiring new players.
