Electric hair clippers are driven by an electric motor which makes the blades oscillate from side to side. They have gradually displaced manual hair clippers in many countries. Three different motor types are used in clipper production, magnetic, rotary and pivot. Rotary style may be driven by direct current or alternating current electricity source. Both magnetic and pivot style clippers use magnetic forces derived from winding copper wire around steel. Alternating current creates a cycle attracting and relaxing to a spring to create the speed and torque to drive the clipper cutter across the combing blade. In the coming years there is an increasing demand for Electric Hair Clipper in the regions of North America, Europe and Asia. Europe and USA is remarkable in the global Electric Hair Clipper industry because of their market share and technology status of Electric Hair Clipper. Some developing countries such as China grows at a good pace owing to large population and high economic growth rate, and they will play important role in the future.
