Electric Propulsion (EP) is a class of space propulsion which makes use of electrical power to accelerate a propellant by different possible electrical and/or magnetic means. The use of electrical power enhances the propulsive performances of the EP thrusters compared with conventional chemical thrusters. Unlike chemical systems, electric propulsion requires very little mass to accelerate a spacecraft. Worldwide, there are a little Electric Propulsion Satellite manufacturers; and there is growing number of enterprises are entering the market attracted by the market potential. ArianeGroup, Busek Co and SITAEL are the top there manufacturers of Electric Propulsion Satellite in the market currently; they account more than half of the market total production volume of Electric Propulsion Satellite. North America and Europe are the largest markets of Electric Propulsion Satellite currently; but the market of Electric Propulsion Satellite in China is forecasted to experience a higher growth speed in the following years due to the growing downstream demand.
