The global Electric Vehicles for Construction, Agriculture and Mining market was valued at 446.35 Million USD in 2021 and will grow with a CAGR of 48.21% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Electric vehicles mean utilizes the power as the power source integrating the advanced technology of the power control and drive section. The electric agricultural vehicle market is expected to grow at a rate of about 58% per year due largely to the global population growth and the trend of population concentrating in urban centers, which will continue to reduce the availability of rural labor and drive the demand for increased agricultural automation. For mining, vehicle electrification has a strong value proposition due to the high operational cost because of the volatility of diesel prices and the high costs of having to ventilate the diesel emissions inside mines. Both costs can be substantially reduced through electrification.
