Electrical contacts are soft, high-conductivity, oxidation-resistant materials used as the makeup of electrical components. They are the materials in a system through which an electrical current flows. Contact material is made of silver, copper and other raw materials for processing to meet customer demand in the electrical contact performance, physical properties, mechanical properties, chemical properties, etc. It is widely used in circuit breakers, contactors and other low voltage electrical products. The multi-layer electrical and electrical contact elements are further developed on the basis of the contact material to form the electrical contact material. In terms of regions, China's consumption accounted for the highest proportion in 2019, over 39 percent, followed by Europe and North America, accounting for 22.28 percent and 22.25 percent, respectively.
