A hospital bed is specifically created for hospitalized patients or others in need of some form of assistance and relief. The special features possessed by these beds are for both the comfort and well-being of patients and for the convenience of health care workers. First of all, healthcare expenditure is increasing worldwide, according to World Health Organisation (WHO); the total healthcare expenditure is increasing globally, leading to the improvements in the healthcare infrastructure. This increase in healthcare expenditure leads to construction and renovation of old hospitals with installation of new medical equipment and hospital beds. Second, The maturing population will drive interest for doctor`s facility beds, as more individuals require industry items for their medical consideration, including at-home restorative consideration. Moreover, producers will present new items with the most recent advances, for example, coordinated scales and key signs screens, to empower request. In this manner, the Hospital Bed Manufacturing industry`s income will keep on growing, in accordance with predictable interest, new advancements and a maturing population. In addition, aging population acts as a major driver for the market as this pool is more prone to falling ill due to low immunity levels and longer recovery period. Aged people require more care

as they are more susceptible to accidents, trauma, injuries due to burns, fractures, and falls that lead to an increase in the number of hospitalisation cases; this fuels the demand for hospital beds.
