The global Electrical Submersible Pump (ESP) market was valued at 1135.46 Million USD in 2021 and will grow with a CAGR of 5.34% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The electrical submersible pump, typically called an ESP, is an efficient and reliable artificial-lift method for lifting moderate to high volumes of fluids from wellbores. These volumes range from a low of 150 B/D to as much as 150,000 B/D (24 to 24,600 m³/d). Variable-speed controllers can extend this range significantly, both on the high and low side. The ESP's main components include: multistaged centrifugal pump, three-phase induction motor, seal-chamber section, power cable and surface controls. First of all, increasing demand for Electric submersible pumps coupled with the exploration of new energy is expected to result in the growth of the market. The shortage of oil and gas drives the market. Productivity is another key point to encourage customers to use it. The adoption of novel technologies will thus enable them drill deeper into oil wells. Such incumbent trends will create attractive opportunities for the sales of electrical submersible pumps (ESPs). Second, on the basis of region, Europe dominates the electrical submersible pumps market and is expected to witness an increase through the forecast period. The market in Central and South America are estimated to grow as a result of a large number of mature fields in Venezuela and Brazil.
