Electrically Conductive Textile is made of a nylon ripstop fabric, metallized with Cu/Ni, extremely strong and flexible. It has conductivity in all directions, i.e. along the axes X, Y and Z. Conductive textile can be supplied as a cloth or as pressure-sensitive adhesive (PAS) tape which is easy to apply to plastic housings in order to cover complex forms and shapes. Conductive textile has low contact resistance and the tape version has superior adhesive force. The product shields electromagnetic interference (EMI) effectively. Global consumption of electrically conductive textiles has been increasing during the past five years with an average growth rate of 10.25%. Global sales of electrically conductive textiles is expected to be over 796 million meters in 2022 and more than 88% will be consumed in North America, Europe, and Asia market. For the product application, electronic Industry occupies the largest market share (54% in 2016).
