Abstracts

The global Electro-Optic Modulators (EOM) market was valued at 285.52 Million USD in 2021 and will grow with a CAGR of 9.9% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Light propagates at varying speeds dependent on a given material's index of refraction. More specifically, it appears to slow down when it moves from an index of lower refraction like air into a medium with a higher refractive index. If we could somehow modify the the refractive index, we could thus control the propagation of light through a medium. One such phenomenon is the electro-optic effect that allows modifying the refractive index of a medium by subjecting it to an electric field. Electro-optic modulators exploit this effect by sending an electric signal through a medium (typically a crystal) to shift the refractive index and therefore change properties of an incoming light beam. We selected a total of 9 companies as samples. The nine companies account for about 75 per cent of the industry's market share. We can think of this as a relatively concentrated market, mainly because there is a high technical threshold, so the concentration is high. And these are large companies with strong r&d capabilities.
