Abstracts

The global Electroactive Polymer market was valued at 5063.37 Million USD in 2021 and will grow with a CAGR of 6.9% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Contrary to conventional materials (metals), EAP products are lighter in weight, durable, and have better conductive properties. These factors are expected to drive the growth of the electroactive polymer market during the forecast period. Among types, the inherently conductive polymers market is projected to grow at the highest CAGR during the forecast period. Inherently conductive polymers include materials, such as polythiophenes, polyanilines, polypyrroles, and polyacetylenes. ICPs are soluble, low-cost organic polymers which have electrical properties like other conductive metals and semiconductors. ICPs are a kind of ionic electroactive polymers which alter shape by motion or diffusion of ions and their conjugated substance. The high demand globally can be attributed to the extensive R&D activities being undertaken in key countries, such as the US, Canada, and Mexico on various potential applications of inherently conductive polymers. The demand for inherently conductive polymers in robotics, artificial muscles, actuators & sensors in the medical, energy harvesting, and electrical & electronics industries is the highest and is expected to drive the EAPs market during the forecast period.
