The global Electroluminescent Materials market was valued at 5.28 Million USD in 2021 and will grow with a CAGR of 7.05% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Electroluminescent materials are able to emit light in response to the application of an electrical current or a strong electric field. It is a well-known phenomenon that is also used in rigid, electronic applications and in flexible textile structures. Global giant manufactures mainly distributed in USA and China. The market is not only influenced by the price, but also influenced by the product performance. The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. Looking to the future years, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin. North America is the largest consumption region of Electroluminescent Materials, with a consumption market share nearly 60% in 2019. The second place is Asia-Pacific; following North America with the consumption market share over 20% in 2019. New investment requires large capital, and it is difficult for small-scale enterprises to enter the industry. Electroluminescent Materials has higher requirements on technology level and processing technology. At present, the market is occupied by Europe and Japan.
