Abstracts

The global Electronic Cigarette Lithium Battery market was valued at 1068.76 Million USD in 2021 and will grow with a CAGR of 30.03% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Electronic Cigarette Lithium Batteries are batteries equipped in E-cigarettes as power sources, that heat up the resistance wire in addition to vaporize the E-liquid. Battery is the biggest component of an E-cigarette, which is frequently a rechargeable lithium battery. This report will study the market size and trends of built-in lithium battery cells and replaceable cells that are applied in three major types of E-cigarettes: cigalikes, egos and mods. As of 2015, around 867 million lithium batteries for electronic cigarettes have been sold to the e-smokers in e-cigarettes or replaceable batteries, comparing to 592 million units for 2014. The consumption of batteries is proportional to e-cig consumption as once an e-cig is sold, at least one battery will be attached or purchased, for the Mod users, ?playing? batteries will create bonus consumption.
