A fuze is an electronic or mechanical device attached to the ammunition to provide reliable and safe detonation at the time and place needed. These devices control the safe separation of the ammunition from the launch platform and trigger the explosion. Missiles, rockets, bombs, and shells. Ammunition and other ammunition are an important part of the army's launching capabilities in modern warfare. Because these ammunitions contain explosives, there is always a danger of explosion during storage, launching and handling. This requires some safety devices to be added to these ammunitions. Safety. The system should work until the ammunition is propelled and launched, and the launching mechanism should be controlled. In order to achieve this, there is also a loading mechanism in the ammunition. All the above necessities are met by a small gadget called a fuze .The basic functions of the fuze are armament, security, shooting and target sensing. The insurance, disarming and ignition mechanisms of mechanical fuze mainly involve mechanical parts, linkage mechanisms and other mechanisms. Because of its simplicity and ease of conceptualization, a mechanical fuze was the first fuze developed and is still used in many different types of ammunition. Fuzes operated by mechanical devices utilize mechanical connections, such as gears,

springs, rotors, sliders, and plungers, or a combination of some of them. Due to extensive safety requirements, mechanical fuzes have many components and are designed with a clockwork structure. There are some main considerations when designing mechanical and electrical fuzes. These factors include safety and stress resistance, deterioration in use, handling and storage, reliability of movement, simple structure and sufficient strength. Due to extensive safety requirements, mechanical fuzes usually have many components and are designed with a clockwork structure. The electronic fuze was developed in the mid-1960s, and since then, this technology has continued to develop. Today, electronic fuzes are being used in many modern weapon systems and have replaced mechanical fuzes in many places. The industry's leading producers are L3 Technologies, Orbital ATK and Kaman, which accounted for 23.64%, 17.83% and 13.99% of revenue in 2019, respectively.
