Electronic grade hydrogen peroxide is generally obtained from a series of purification and purification processes using low-cost and readily available industrial grade H₂O₂. Electronic grade hydrogen peroxide can be divided into conventional semiconductor grade, fine electronic grade and ultra high purity grade according to the scope of application. Electronic grade hydrogen peroxide is widely used in the electronics industry. It is one of the electronic chemicals necessary for the production of integrated circuits. It is mainly used as a cleaning agent for semiconductor crystal wafers, an etchant and a photoresist remover, and an advanced insulation for the electronics industry. The layer, the removal of inorganic impurities in the electrode, copper, copper alloy and semiconductor materials gallium, germanium and the processing of the manufacturing process of the picture tube, its purity has a very important impact on the yield, electrical performance and reliability of the integrated circuit.
