Electronic Shelf Label, also known by the acronym ESL. It is the latest solution for inventory and price management in the retail sector, based on the use of advanced IT technology. ESL replaces conventional paper price tags attached to the shelves of supermarkets and department stores with, for example, LCDs and electronic paper (E-paper) that show information on product price, sales promotions, etc. ESL takes advantage of Zigbee, a low-power wireless communication technology, to keep product prices updated in real time. ESL consists of an e-paper equipped tag and gateway which delivers product information. The central server transmits information of each product to the gateway, which in turn sends such information to thousands of tags at the same time. An electronic shelf label includes a transceiver configured to communicate with a plurality of wireless data tags associated with a plurality of retail products. The industry's leading manufacturers are BOC (ses-imagotag), Pricer and SoluM, with revenues of 30.07%, 17.29% and 14.56% respectively in 2019.
