The global Electroplating market was valued at 710.64 Million USD in 2021 and will grow with a CAGR of 2.71% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Electroplating is a process that uses an electric current to reduce dissolved metal cations so that they form a thin coherent metal coating on an electrode. The term is also used for electrical oxidation of anions on to a solid substrate, as in the formation of silver chloride on silver wire to make silver/silver-chloride electrodes. Electroplating is primarily used to change the surface properties of an object (such as abrasion and wear resistance, corrosion protection, lubricity, aesthetic qualities), but may also be used to build up thickness on undersized parts or to form objects by electroforming. Globally North America dominated the market for electroplating in 2017 with highest market share due to adoption of this technology by large number of industries since its invention. North America was followed by Europe and Asia-Pacific as the second and third largest regional market for electroplating. However, Asia-Pacific is expected to be fastest growing regional segment during the period of study due to rapidly growing industrial base and the region becoming manufacturing hub for major end-use industries especially in major economies like Japan, India and China.
