The global Ellipsometer market was valued at 46.38 Million USD in 2021 and will grow with a CAGR of 3.71% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An ellipsometer enables to measure the refractive index and the thickness of semi-transparent thin films. The instrument relies on the fact that the reflection at a dielectric interface depends on the polarization of the light while the transmission of light through a transparent layer changes the phase of the incoming wave depending on the refractive index of the material. An ellipsometer can be used to measure layers as thin as 1 nm up to layers which are several microns thick. Applications include the accurate thickness measurement of thin films, the identification of materials and thin layers and the characterization of surfaces. The Ellipsometer industry has developed maturely and highly concentration. There are several main brands, distributed USA, EU, India and China. The market demand of Ellipsometer is relatively strong in the past five years, narrower fluctuation. Globally, J.A. Woollam, Horiba, Semilab, Sentech, Angstrom Sun Technologies, etc. are the top players. These manufacturers play important roles in global market. In China, the market also dominated Elliptop-Products, which has 10 years professional production history. USA, Japan, Europe and China are the major consumers, occupy for about 85% of share. In the future, the emerging market will drive the market demand, especially in China and India. The infrastructure of these regions

need further to be developed, with huge potential.
