The global Emergency Beacon Transmitter market was valued at 126.14 Million USD in 2021 and will grow with a CAGR of 3.19% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Emergency beacon transmitters are tracking devices that assist in the detection and location of boats, aircraft, and people in distress. When the transmitter is activated, the beacon emits a distress signal, and simultaneously the location of such signals is detected by non-geostationary satellites. This information acquired is passed on to the search & rescue authorities to locate survivors. The availability of reliable emergency beacon transmitters has led to the increasing adoption of these devices in the aviation sector, which, in turn, has contributed to the overall growth of the global emergency beacon transmitter market. There are several advanced devices available in the market such as 406 MHz frequency transmitters, which offer accurate information, maximize search & rescue resource management, and provide real-time emergency tracking and response through the use of a network of satellites known as Cospas-Sarsat system.
