Abstracts

The global Emollient Esters market was valued at 175.05 Million USD in 2021 and will grow with a CAGR of 3.27% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The growth of the emollient esters market is primarily being driven by the growth in end-user industries like skin care, hair care, cosmetics, and oral care. Also, factors such as changing lifestyle, growing consciousness for personal hygiene and increase in purchasing power of people for cosmetics & personal care products in emerging countries are expected to drive the growth of emollient esters market during the forecast period. The shift from use of oil based emollients to emollient esters is one of the reasons supporting the growth of this market. However, stringent labelling rules for cosmetic ingredients and availability of cheaper and greener substitutes of emollients are some of the challenges which may restrict the growth of the emollient esters market.
