The global Encapsulants market was valued at 1077.68 Million USD in 2021 and will grow with a CAGR of 3.08% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The increasing complexity & functionality of electronics devices and the trend of miniaturization in devices are among the major reasons for the growing importance of encapsulants in the semiconductor & electronics industry. Electronics devices are usually made of small components and structures, which have to be arranged properly and accurately. Any flaw in the connection can result in the faulty functioning of the devices. Encapsulants play a vital role in maintaining the accuracy of the arrangement by creating a layer on the structure of the device and ensuring that all components are in place.
