The global Endometriosis market was valued at 1659.93 Million USD in 2021 and will grow with a CAGR of 1.35% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Endometriosis is a medical condition in which the tissue that forms normal lining of uterus appears outside the uterus cavity and may involve ovaries, bowel or tissue lining of the pelvic floor. Rising incidences of endometriosis due to diagnostic improvements leading to early identification, environmental factors, and rising awareness is the key factor contributing to growth of the market. Global endometriosis market is expected to register a healthy growth, owing to rise in awareness amongst patients and physicians. In addition, considerable research efforts towards development of novel non hormonal drugs, diagnostic and surgical techniques coupled with substantial support in terms of funding has helped to further enhance the growth of this market. Therefore, huge unmet needs for curative treatment of endometriosis will serve this market as a potential opportunity. The growth in global endometriosis market will be primarily driven by emerging Asian economies, where the disease prevalence is almost 10% of the total female population of this region.
