The global Energy Efficient Motor market was valued at 2670.74 Million USD in 2021 and will grow with a CAGR of 3.43% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The major factors driving the growth of this market include the saving of energy and subsequent cost over traditional motors, increasing support from governments worldwide for the adoption of energy efficient motor, rising need to diminish greenhouse effect, and increasing adoption of energy efficient motors in the industrial sector. Energy efficient motors are used in various application areas in the agriculture vertical; these applications include irrigation, ventilation, grain handling, material handling, aeration, and conditioning. Motors are among the largest energy consuming devices on farms. Motors used in the agriculture sector account for 18% of the on-farm energy consumption worldwide. Also, the energy saving solutions are applicable to all segments of the agriculture sector including dairies and livestock producers, nurseries, crop farmers, and food processing companies. This would further propel the growth of the energy efficient motor market during the forecast period. The pumps application accounted for the largest share of the energy efficient motor market in 2017. Pumps are used in various end-user industries such as water and wastewater, oil and gas, agriculture, and commercial. Further, the pump application is a major shareholder of the energy efficient motor market as the pumps are the major consumer of electricity in the

industrial sector.
