Energy storage battery for microgrids is an energy reservoir that can store electrical energy and supply energy when required. Such a battery system has the added advantage of matching generation to the time of use and enables peak-shaving applications. Battery-based energy storage is more environmentally-friendly than traditional diesel generators and significantly reduces the fuel and sizing needs for common backup generators. Even small amounts of energy storage can have a major impact on reducing fuel costs, maintenance and omissions of diesel or bio-diesel generators. The global energy storage battery for microgrids industry mainly concentrates in EU, USA and Japan. The global leading players in this market are NGK Group, Samsung SDI, NEC, Panasonic, MHI and Toshiba etc., which accounts for 49.38% of total revenue in 2015. In China the market leaders are BYD, CALB and ATL.
