The global Energy Storage System market was valued at 6138.47 Million USD in 2021 and will grow with a CAGR of 25.05% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Energy storage is the capture of energy produced at one time for use at a later time. A device that stores energy is generally called an accumulator or battery. Energy comes in multiple forms including radiation, chemical, gravitational potential, electrical potential, electricity, elevated temperature, latent heat and kinetic. Energy storage involves converting energy from forms that are difficult to store to more conveniently or economically storable forms. Majorly fuelling the global energy storage systems market worldwide is the pressing need to address vehicular pollution which is serving to rapidly deteriorate the air quality in cities particularly. This has resulted in policy changes forcing commuters to opt for less polluting vehicles such as electric cars, two-wheelers, buses, and trucks. This in turn has provided a boost to the sales of energy storage systems. The growing railway network is also providing a fillip to the market. Besides the automotive segment, commercial and industrial establishments - together known as non-residential segment - are other key drivers of the global energy storage systems market as their need to store energy is high. The residential sector too is expected to grow at a healthy clip in the upcoming years because of the increasing adoption of solar panels to reduce electricity cost and tide over power cuts.
