The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Enhanced flight vision systems, commonly termed as EFVS or EVS, improves situational awareness by using multiple sensors onboard aircraft to provide the pilot with an enhanced display of the outside environment. It provides a pilot with the ability to operate in degraded visual conditions, including fog, rainfall, and others. It is a critical component to perform flight operations, such as taxiing, takeoff, and others, in unfamiliar airports. The enhanced flight vision systems encompass various components including a display unit, camera, and sensor, among others. Although initially developed for military aircraft, this system is being widely used in commercial and business aircraft, as well. Infrared, synthetic vision, global positioning system, and millimeter wave radar are the technologies associated with enhanced flight vision systems. The alternatives of enhanced flight vision systems include Instrument landing system (ILS) and GPS-assisted, landing, among others.
