Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Enhanced vision system, a stand-alone thermal imaging camera that sees infrared energy emitting, or radiating, from objects and forms a real-time video image that is displayed on an MFD or dedicated video display screen. The system's primary benefit is improving situational awareness. At night, an EVS eliminates the visual effects of darkness, turning it into day on the display, and enabling the pilot to see and avoid clouds at night. During the day, the system enables the pilot to see through smoke, haze and smog. At present, in developed countries, the Enhanced Vision System (EVS) industry is generally at a more advanced level. The world's large enterprises are mainly concentrated in USA, Europe and Israel. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, and leading technical level.
