Abstracts

The global Enoki Mushroom market was valued at 1579.19 Million USD in 2021 and will grow with a CAGR of .19% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Enoki mushrooms are recognized by their almost pure white color and long stems topped with petite, convex caps. They are also grown in bouquets and fitted with a tight collar at their base to encourage the growth of their signature long, thin delicate stems which can grow up to five inches in length. Their texture is tender yet firm with a crunchy bite and mild, directly edible flavor. Wild Enoki mushrooms are significantly different in appearance from the cultivated form as they have larger caps and shorter stems and their coloring is orange to brown. The biggest growth is expected in the Asian countries. Mushroom consumption in China, Japan and India is quite large. Partly because of the growing focus on healthy and organic foods, demand in these countries will continue to grow. China is the largest market for cultivated mushrooms, accounting for more than 30 percent of the global market. Moreover, demand is on the rise in North America, and South America is also recording an explosive growth. Meanwhile, Africa and the Middle East recorded a reasonable growth.
