Abstracts

The global Ethylene Vinyl Acetate market was valued at 6347.84 Million USD in 2021 and will grow with a CAGR of 4.99% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ethylene-vinyl acetate (EVA), also known as poly (ethylene-vinyl acetate) (PEVA), is the copolymer of ethylene and vinyl acetate. The weight percent vinyl acetate usually varies from 10 to 40%, with the remainder being ethylene. Compared to plasticized PVC, EVA has long lasting properties and the usage of EVA reduces the sealing temperature. This in turn, reduces the fabrication time for flexible sheets and films, increases the efficiency, and reduces the production costs for industries. Moreover, EVA copolymers can also withstand increased amounts of filler loading without serious changes in their physical properties. Additionally, EVA copolymers also have larger ozone resistance, and exhibit lesser thermal stability under increased load and lacks resilience.
