The global Evaporated Milk market was valued at 8360.31 Million USD in 2021 and will grow with a CAGR of 1.22% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Evaporated milk, known in some countries as unsweetened condensed milk, is a shelf-stable canned milk product with about 60% of the water removed from fresh milk. Evaporated milk can be made from whole milk or skim milk. In either case, the milk is homogenized and then the water is removed by gently heating it. The evaporated milk product is sealed in cans which are then heated to kill any bacteria in the milk. Thus evaporated milk is actually sterile, which, combined with the fact that it is stored in airtight cans, gives it an extremely long shelf life. In consumption market, North America and Europe are the mainly consumption regions due to the bigger demand of downstream applications. In 2017, these two regions occupied 47.14% of the global consumption volume in total.
