A fan filter unit (FFU) is a type of motorized air filtering equipment. It is used to supply purified air to cleanrooms, laboratories, medical facilities or microenvironments by removing harmful airborne particles from recirculating air. The units are installed within the system`s ceiling or floor grid. Large cleanrooms require a proportionally large number of FFUs, which in some cases may range from several hundred to several thousand. Units often contain their own pre-filter, HEPA filter and internally controllable fan air distribution.Especially in China, many small companies blindly imitate the products of large enterprises. In the competition, these companies often occupy the market by low prices. Fan Filter Unit industry concentration is too low, which can only rely on increasing the supervision of product quality and relying on the continuous purification of the market to gradually solve. With the continuous development of key enterprises in the industry, some small enterprises will gradually withdraw from the Fan Filter Unit market. Of the major players of Fan Filter Unit, American Air Filter Company, Inc. maintained its first place in the ranking in 2017. American Air Filter Company, Inc. accounted for 10.15% of the Global Fan Filter Unit revenue market share in 2017. Other players accounted for 8.87%, 8.59% including Pentagon Technologies and Nicotra
