Fatty amine is nitrogen derivatives of fatty acids, olefins, or alcohols prepared from natural sources, fats and oils, or petrochemical raw materials. Commercially available fatty amine consists of either a mixture of carbon chains or a specific chain length from C-8-C-22. Fatty amines are cationic surface-active compounds which strongly adhere to surfaces by either physical or chemical bonding. Important commercial products are prepared using fatty amines as reactive intermediates. Fatty amine is any amine attached to a hydrocarbon chain of eight or more carbon atoms in length. The industry is highly fragmented in terms of products, end uses and suppliers, but its markets can broadly be categorized as water treatment, agro-chemicals, oilfield chemicals, textile chemistry, asphalt additives, anti-caking, etc.
