Fatty amines are the nitrogen derivatives of alcohols, fatty acids, and olefins, manufactured from natural sources, petrochemical raw materials, and fats and oils. Fatty amines are cationic surface-active compounds, which adhere to surfaces by either chemical or physical bonds. Commercial products are manufactured using fatty amines as reactive intermediates. In terms of type, the global fatty amines market is segmented as primary fatty amines, secondary fatty amines, and tertiary fatty amines. Tertiary fatty amines are processed using nickel and cobalt catalysts within the pressure range of 7-14 (bar) and temperatures between 302°F and 446°F. The tertiary fatty amines segment is witnessing growth because they are extensively used as corrosion inhibitors and lubricant additives. The segment will continue to grow during the estimated period due to their growing adoption as a sanitizing agent, fabric softeners, and organoclays by various end users in the fatty amines ethoxylates market.
