Fatty acid esters (FAEs) are a type of ester that result from the combination of a fatty acid with an alcohol. When the alcohol component is glycerol, the fatty acid esters produced can be monoglycerides, diglycerides, or triglycerides. Dietary fats are chemically triglycerides. Fatty esters are expected to witness tremendous growth owing to its increasing use in personal care including cosmetics, lubricants, paper and food products. Growing demand for fatty esters for industrial applications owing to its environment friendliness is expected to augment market growth over the forecast period. In addition, growing consumer preference towards natural and specialty esters in personal care products is anticipated to further drive market growth. Increasing consumption of fatty esters in biodiesels coupled with the growing demand for biodiesels owing to the presence of supporting regulations is likely to propel fatty ester market demand over the forecast period.
