FCC catalyst additives are injected into FCC units in small amounts for the purpose of improving specific yields, enhancing product quality, or for reducing emissions from the regenerator. The main composition of FCC catalyst additives is zeolite molecular sieve, which is the active ingredient in the function process on catalyst. And there are also other ingredients in different FCC catalyst additives, such as platinum metal, palladium metal, etc.FCC catalyst additives are used in process of vacuum gas oil, residual, and others. Report data showed that 71.67% of the FCC catalyst additives market demand in Vacuum Gas Oil production, 17.28% in residue production, and 11.05% in others in 2015. With the development of economy, these industries will need more FCC catalyst additives. So, FCC catalyst additives have a huge market potential in the future. Manufacturers engaged in the industry are trying to produce high quality FCC catalyst additives through improving manufacturing process.
