Fluid catalytic cracking (FCC) is one of the most important conversion processes used in petroleum refineries. It is widely used to convert the high-boiling, high-molecular weight hydrocarbon fractions of petroleum crude oils into more valuable gasoline, olefinic gases, and other products. FCC catalyst and additives are used in production of vacuum gas oil, residual, and others. Report data showed that 70.97% of the FCC catalyst and additives market demand in vacuum gas oil production, 17.15% in residue production, and 11.88% in others in 2018. With the development of economy, these industries will need more FCC catalyst and additives. So, FCC catalyst and additives have a huge market potential in the future.
