Femoral arteriovenous cannula provides temporary support for extracorporeal circulation and gas exchange to replace heart or lung function as a bridge for resuscitation or other long-term support. When intubated through the femoral and internal jugular veins, blood is drawn through the femoral or internal jugular vein catheter and pumped through membrane oxygenators to remove carbon dioxide, increase oxygen, and provide temperature control. Partial to complete extracorporeal lung support is provided to maintain adequate oxygenation and normal blood flow. Globally, major manufacturers of femoral arteriovenous systems include Medtronic, Edward Lifescience, LivaNova, Surge Cardiovascular, Kangxin, Xenios AG, and Chalice Medical. The main producers are mainly in Europe and the United States.
