The global Ferric Chloride market was valued at 47 Million USD in 2021 and will grow with a CAGR of .69% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ferric chloride also called as iron chloride is a commodity chemical which is rarely observed in its natural form. Ferric chloride is extensively used as a flocculants in water treatment applications across the globe. Other applications of ferric chloride include its use in the production of printed circuit boards and as a catalyst in organic synthesis. In consumption market, the growth rate of global consumption is smooth relatively. Europe and USA are still the mainly consumption regions due to the advanced production technology and rapid development of economy. The major raw material for ferric chloride is scrap iron, chlorine, hydrochloric acid, etc. On the global market, supply of raw materials is full. Fluctuations in the price of the upstream product will impact on the production cost of ferric chloride industry.
