## Abstracts

The global Ferrite Core Inductor market was valued at 677 Million USD in 2021 and will grow with a CAGR of 6.13% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

It is the fixed value inductors which have a ferrite core placed inside the coil are known as a ferrite core inductor. The air core inductors and iron core inductors have a low inductance value, limited frequency operation and more losses. By using ferrite core instead of iron core these problem can be overcome. Mixing Iron oxide ( $\text{Fe}_2\text{O}_3$ ) in combination with other metal oxides like (Mn), zinc(Zn) or magnesium(Mg) at a temperature of 1000? C - 1300? C will result in a material with very interesting magnetic properties called ferrite. Ferrite core inductors have high permeability, high electrical resistivity and low eddy current losses these characteristics make them suitable for many high-frequency applications. For the major players of ferrite core inductor, the Murata maintained its first place in the ranking in 2019, followed by TDK, Taiyo Yuden. The Top 3 players accounted for about 40% market share of the ferrite core inductor.
